

DUSTSTORMS IN THE UNITED STATES, JUNE 1936

By J. P. KOHLER

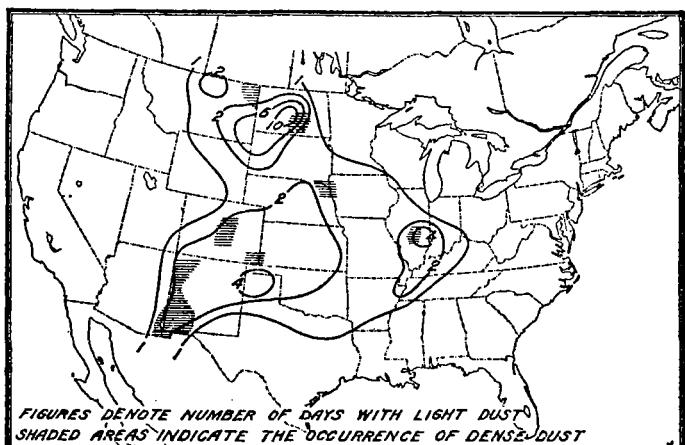

Duststorms were somewhat more frequent, but less severe, in June than in the preceding month. The increases in number of duststorms are directly attributable to subnormal precipitation. Percentages of normal rainfall, given by preliminary but rather complete records, support this contention. The Dakotas, Minnesota, Kansas, Tennessee, and Indiana had less than 40 percent, and Iowa, Nebraska, Oklahoma, and Texas 60 percent or less, of the normal monthly rainfall.

Comparison of the accompanying chart with that for May brings out several notable differences. The eastern boundary of the dust area receded from western Pennsylvania to the extreme western portion of Ohio; Pennsylvania received approximately 94 percent of normal rainfall. Similarly the northwestern limits migrated toward the interior because of above normal precipitation over the States of Idaho and Wyoming. Further, three maxima of light dust were centered in the following sections: North Dakota and southeastern Montana; central and southern Illinois; Oklahoma, New Mexico, and portions of adjoining States. Areas of dense dust, delineated by cross-hatch lines, are small and widely scattered—the direct consequence of weak cyclonic movement during the summer months.

Duststorms effected no material damage to crops, partly because of advanced deterioration due to drought conditions and the weak character of the duststorms. However, in several instances, dense duststorms attained sufficient force to cause discomfort to inhabitants. On the 26th, Sioux City, Iowa, had a duststorm of considerable severity. The storm approached from the northwest,

visibility was reduced to 200 feet for a period of 10 minutes, and the wind maintained a velocity of 67 miles per hour from northwest for a period of 5 minutes. One and twenty-three hundredths inches of rain was recorded at the Weather Bureau Station. Damage was confined mostly to windows and trees. A dense duststorm on the 12th in northeastern Montana reduced horizontal visibility to nearly zero and effected considerable soil erosion.

There were no reports of loss of life due to duststorms in the month of June.

Number of days with duststorms or dusty conditions, June 1936.

RECENT ADDITIONS

The following have been selected from among the titles of books recently received as representing those most likely to be useful to Weather Bureau officials in their meteorological work and studies:

Arctowski, H., & Tešla, J.

Étude des transports de masses atmosphériques survenus au cours du mois de mars 1931. Lwow. 1935. pp. 160-189. diagrs. 25 cm. (Institut de géophysique de l'Université de Lwow. Communication No. 101.)

Baldit, A.

Les perturbations dues au relief terrestre et l'aviation. Paris. 1935. 46 p. diagrs. 28 cm. (Extrait de "La Météorologie" n° 121, juin 1935.)

Bayfield, E. G.

The influence of climate, soil, and fertilizers upon quality of soft winter wheat. Wooster. 1936. 77 p. maps (1 fold.), tables. 23 cm. (Ohio agricultural experiment station. Bulletin 563. March, 1936.)

Compton, Karl T.

The government's responsibilities in science. [New York.] 1935. 8 p. 28 cm. (Reprinted from Science, April 12, 1935, v. 81, no. 2102, pp. 347-355.)

Deppermann, Charles E.

The mean transport of air in the Indian and South Pacific oceans. Manila. 1935. 13 p., 18 pls. 42½ cm. (At head of title: Weather bureau. Manila central observatory.)

Dorochov, L. M.

An instrument for the determination of humidity in an air current during physiological research. Moscou. 1935. pp. 273-276. illus. 26 cm. (Comptes rendus (Doklady) de l'Académie des sciences de l'URSS. 1935. vol. II (VIII), no. 6. (66.) Nouvelle série.)

Edström, Gunnar.

Studies in natural and artificial atmospheric electric ions. Lund. 1935. 83 p. incl. illus., tables, diagrs. 23½ cm. (On cover: Acta medica Scandinavica. Supplementum LXI). Summary also in German. "Works of reference": pp. [72]-83.

Doporte, Mariano.

El coeficiente de turbulencia y la variación del viento con la altura sobre Madrid. n. p. 1936. pp. 298-303. tab., diagr. 24 cm. (Publicado en Anales de la Sociedad española de física y química, t. XXXIV, pag. 298.)

Fisher, Reginald Gilbert.

The relation of North American prehistory to post-glacial climatic fluctuations. Albuquerque, N. M. 1935. 91, x p. illus. (maps), diagrs. 28 cm. (The University of New Mexico bulletin. Monograph series, v. 1, no. 2; whole no. 274.) "A monograph of the University of New Mexico and the School of American research." 10-page bibliography at end.

Glawion, Horst.

Wetter und Klima Vorpommerns dargestellt am Beispiel Griefswald. Griefswald. 1933. 115 p. figs., tables. plates pp. 85-113. (Inaug.-Dissertation Griefswald.)

Gösele, Lothar.

Untersuchungen über die Möglichkeit einer langfristigen Erntevorhersage in Deutschland. Leipzig. 1935. pp. 121-144. tabs., diagrs. 22½ cm. (Abdruck aus den Berichten der mathematisch-physischen Klasse der Sächsischen Akademie der Wissenschaften zu Leipzig. 87. Band. Sitzung vom 13. Mai 1935.)

Hermann, Ernst.

Gletscher und Vulkane. Berlin. [c1934]. 311 p. illus. 18½ cm. "Dieses Werk ist am fünfzehnten Buchjahr als dritter Band der fünften wissenschaftlichen Jahresreihe (W) für die Mitglieder des Volksverbandes der Büchernfreunde hergestellt worden und wird nur an diese abgegeben."

Hoyt, William Glenn, & others.

Studies of relations of rainfall and run-off in the United States. Wash. 1936. 301 p. incl. tables, diagrs. 23 cm. (U. S. Geological survey. Water-supply paper 772). "References": pp. 283-294.

International council of scientific unions.

Report of the commission appointed to further the study of solar and terrestrial relationships. Rapport de la Commission instituée pour poursuivre l'étude des relations entre les phénomènes solaires et terrestres. 4th. 1936. Paris. 25 cm. At head of title: International research council. Conseil international de recherches. Half-Title: Solar and terrestrial relationships. Relations entre les phénomènes solaires et terrestres. English and French.

Italy. Servizio idrografico.

Annali idrologici. 1932. Anno 11. Roma. 1933. tables. 24 x 34½ cm. . . Sezione autonoma del genio civile con sede in Genova.] Annali idrologico. 1932. Anno 11. Roma. 1933. tables. 24 x 34½ cm. [. . Sezione autonoma del genio civile per i bacini confinanti al litorale adriatico e jonico dal Candelaro al lato Bari.] Annali idrologico. 1931-32. Anno 10-11. Roma. 1932-33. 2 v. tables. 24 x 34½ cm. [Ufficio idrografico del Po. Sezione di Torino.]

Jarvis, Clarence Sylvester, & others.

Floods in the United States; magnitude and frequency. Prepared in collaboration with the Water planning committee of the National resources board and its predecessor the Mississippi valley committee. Wash. 1936. 497 p. incl. tables. 2 fold. maps, fold. diagr. 23 cm. (U. S. Geological survey. Water supply paper 771). Bibliography: pp. 468-487.

Johnson, Hollister.

The New York state flood of July 1935. (Contributions to the hydrology of the United States, 1936. p. 233-268.) Wash. 1936. pp. 233-268. pls., fold. maps, tabs. 23½ cm. (U. S. Geological survey. Water-supply paper 773-E.)

Jurva, Risto.

Übersicht der Eisverhältnisse im Winter 1933-34 an dem Küsten Finlands. (Yleiskatsaus talven 1933-34 jääsuhteisiin.) Helsinki. 1935. 71 p. tables, diagrs. 24 cm. (Merentutkimuslaitoksen julkaisu N:o 97.)

Lisowski, Konstanty.

Zarys meteorologii ogólnej . . . [Esquisse de météorologie générale.] Krakow. 1925. 310 p. figs. 3 plates in back. 20 cm.
